

Deep-groove Ball Bearings

Quest, for Higher Performance and Reliability

Recent industrial machinery trends show an increasing need for bearings capable of handling higher speeds and higher temperature conditions. NACHI QUEST brand deep-groove ball bearings meet these changing demands.

Heat-resistant rubber seals

At high temperatures, rubber hardens degrading the seal performance. This allows foreign matter to enter the bearing. New heat-resistant nitrile rubber seals maintain sealing performance at high temperature.

Test bearing 6206-2NSE, 6206-2NSE9
Circumstance Muddy water sprayed
Rotating speed 1000 rpm (Inner ring rotation), Intermittent Test period 20 hours
Test method Compare the amount of intruded dust in test bearings with rubber seals degraded at high temperature (140°C x 70 hours)

NACHI original high performance grease

- Modifying the base oil improves high temperature performance without sacrificing the low noise and low torque properties of the conventional grease.
- New standard grease has two times longer grease life than the conventional grease at 120°C.

Test bearing 6203-2NKE
Rotating speed 10000 rpm (Inner ring rotation)
Radial load Fr=500 N
Ambient temp. 120°C

Environmentally-Friendly, conforms to ELV and RoHS directive

Free from hazardous substances such as hexavalent chromium
